GENERAL INFORMATION

- **HOURS OF OPERATION:**

Mon. – Thurs. 7:30 A.M. – 5 P.M Friday 7:30 A.M– Noon Mountain standard time. You can place orders **24 hours a day at www.photoformulary.com, or during office hours by calling 1-800-922-5255 .**

- **PAYMENT:**

The Formulary will accept Visa, MasterCard, American Express, Discover for online & phone-in orders. **Please call for accurate cost before mailing a money order to avoid delays**

We accept purchase order numbers from Government agencies or Public Schools. Terms of sale are net 30 days from date of invoice.

- **PRICES AND DISCOUNTS:**

The prices in this catalog are updated yearly, however PRICES MAY CHANGE WITHOUT NOTICE. For the most up-to-date and accurate pricing visit our website at www.photoformulary.com . All of our chemicals are prepackaged in 10 grams, 100 grams, and 1 pound packages. You may order in any multiple of these packages or if you have need for an odd amount we will do special scaling for an additional fee of \$2.00 per unit. There is no minimum order value. Every order is welcome.

- **BULK QUANTITIES:**

Many of the items in this catalog are available in bulk. On such purchases, significant reductions in cost are available. If you should require larger than catalog quantities, phone or email us at Formulary@blackfoot.net for special quotes.

- **SPECIAL PACKAGING:**

Where special packaging is required for hazardous items and/or certain export and dangerous goods forms are required, there will be an additional charge. Assessed on an order by order basis.

- **KIT INFORMATION:**

When ordering any kit from the Formulary you will receive all the chemicals required for that process, paper is **NOT** included. Each kit comes with full instructions and chemical warnings. Quantity on each kit refers to the working solution the kit will make. We recommend distilled water for all solutions.

Whenever “rolls of film” are mentioned it is in reference to a 36 exposure roll of 35mm film, “sheet film” refers to 4x5 size unless otherwise stated.

Whenever you see gallons mentioned, these are an approximate measure as liters do not convert to gallons exactly.

Important Notices

- Some of our chemicals require a DEA Authorized Buyer Form, which can be found at the back of this catalog or on our website. This form must be completed and processed before said chemical purchases can be processed and shipped. DEA required and hazard chemicals are clearly marked.
- SDS sheets can be found on our website www.photoformulary.com
- **The user assumes all risks upon accepting any chemicals or kits from the Formulary, and accepts this responsibility upon ordering. If for any reason you do not wish to assume all risks, return the unopened chemicals within 30 days for a full refund.*****
- All chemicals are hazardous and **MUST** be kept away from children.
- Please consult with local sewer and water authorities regarding disposal of photographic chemicals in your area.

**The Formulary recommends
distilled water for
all solutions!**

Results cannot be guaranteed if distilled water is not used.

- **SHIPPING POLICIES:**

We strive to ship all orders within 24 hours, with the exception of special order items, items on backorder, & lightboxes.

Hazards may not be shipped via USPS, only UPS Ground. We reserve the right to change an instructed method of shipment to comply with lawful shipping regulations, and additional shipping charges will be billed to the purchaser.

We also offer UPS 2-Day air service, UPS 3-Day Select, and Priority Mail for non-hazard items.

PHOTOGRAPHERS' FORMULARY IS LOCATED IN A REMOTE AREA IN MONTANA AND DOES NOT OFFER NEXT DAY SHIPPING. ALL EXPEDITED SHIPPING METHODS ARE FROM TIME OF ORDER PROCESSING NOT TIME OF ORDER PLACEMENT. On UPS expedited shipping add 1 day to any method chosen. Examples: 3 Day Air is actually 4 days, 2nd Day Air is actually 3 days.---

> **Please note any orders placed on Friday after 10:00am MST will not be processed until the following Monday.**

Shipments to Alaska or Hawaii: Regulations prohibit the shipment of many hazards to the above states. UPS delivery is limited to specific population centers. Many non-hazardous chemicals can be shipped via the USPS.

Shipments outside the United States: Regulations prohibit the shipment of hazards and some chemicals outside the U.S. We recommend you call, fax, or e-mail the Formulary to verify international shipping of your order.

- **RETURNS:**

Return shipments will **NOT** be accepted unless we have been contacted, return has been approved, and complete shipping instructions given.

- **USE:**

All of our chemicals are offered for laboratory use only. They are not for drug, household or other uses. This means they:

- may **NOT** be used as drugs
- may **NOT** be used as cosmetics
- may **NOT** be used as food additives
- may **NOT** be used as household additives
- may **NOT** be used as agricultural, horticulture or pesticidal products.

- **WARRANTIES:**

Since we cannot be certain of your application of our chemicals, we offer no warranties regarding use, handling of the products, or handling of the container itself, and will not be responsible for any loss involving their use.

- **TABLE OF TRADE MARKS**

The following products are trademark names of Kodak Corp.:

- ◇ FILMS; TMAX, TECHNICAL PAN, PLUS X, TRI X
- ◇ DEVELOPERS; D-1, D-12, D-23, D-76, DEKTOL, SELECTOL, SELECTOL SOFT
- ◇ REDUCERS; R-4A, R-4B
- ◇ INTENSIFIERS; IN-5
- ◇ TONERS; GP-1, T-8, T-21
- ◇ C-41 DEVELOPER

The following products are trademark names of Ilford Corp.:

- ◇ ID-3, CIBACHROME II PAPER CRC.44M, CIBACHROME II DELUXE CPS1K, CIBACHROME II DISPLAY FILM CTD.F7.

HOLOTEST 8E75HD, and PORTRIGA are trademark names of Agfa Film.

The following products are trademark names of Ansco Company:

- ◇ ANSCO 45, ANSCO 70, ANSCO 113, ANSCO 115, ANSCO 120, ANSCO 130, ANSCO 241, ANSCO 311.

CRONE C is a trademark name of Ethol Chemical Co.

FILM DEVELOPERS

Photographers' Formulary offers a variety of black-and-white film developers in kit form. This group is comprised of specialty developers as well as general purpose developers. The large selection of developers is intended to provide alternatives and solutions for most film-developing problems.

FORMULARY UNIVERSAL CONCENTRATE

is an economical hydroquinone-Phenidone developer, which gives good contrast in films. The chemicals are used to prepare a stock solution which is diluted 1:19 for film. This developer is also an excellent paper developer, providing neutral tones, deep blacks and a pleasing tonal gradation. The stock solutions are usable for 4 to 5 months after mixing; the working solutions are one shot. A 1 liter kit is used to make 5 to 20 liters of working solution depending upon dilution's used.

To Make a Working Solution	Cat. No.	Price
5-20 liters	01-0020	\$16.95

FORMULARY FILM DEVELOPER 3

is a soft working metol based developer that is similar in composition to Ilford ID-3. Developer 3 is capable of producing negatives with an excellent tonal range with sharpness and grain comparable to those obtained using D-76. Developer 3 can be used as either a single bath developer or as a two bath semi-compensating developer. Directions for both types of usage are given in the instructions. The stock solutions have a shelf life of 6 months and will make up to 10 liters of working solution depending on the dilution's. The working solution is a one shot developer.

To Make a Working Solution	Cat. No.	Price
10 liters (2.5 gal)	01-0030	\$16.95

FORMULARY SUBSTITUTE FOR D-19

is a published formula originally designed for use with X-ray materials and is now recognized as an excellent developer for aero films and plates when high contrast is desired. Compared with Kodak D-76, Formulary D-19 produces negatives with high contrast, slightly larger grain size and a small decrease in sharpness. The life of this developer is in excess of 1 year and will not stain tanks or trays.

To Make a Working Solution	Cat. No.	Price
1 liter kit	01-0035	\$12.95
1 Gallon Kit	01-0036	24.95

FORMULARY FILM DEVELOPER 23

is a metol-based semi-compensating film developer similar to Kodak D-23. The developer produces negatives with low to medium contrast. Developer 23 is the favorite of Zone System users. Four rolls of film can be processed in 1 liter of Formulary 23 without replenishment. With replenisher (Formulary DK-25R, 01-0057) a total of 20 to 25 rolls of film per liter can be developed.

The chemicals in this kit are used to make a working solution with a shelf life of 6 months.

To Make a Working Solution	Cat. No.	Price
1 liter kit	01-0040	\$11.95
2 liter kit	01-0050	15.95
4 liter kit	01-0051	19.95

FORMULARY D-25 FINE GRAIN FILM DEVELOPER

is a fine-grain film developer that contains metol and a mild silver solvent, sodium Metabisulfite. The grain obtained with D-25 resembles that obtained with Developer 12, however, D-25 contains metol rather than the toxic p-Phenylenediamine found in Developer 12. Contrast is normal with D-25, but softness may result. D-25 is reputed to be a non-staining developer; (Continued next column)

FORMULARY D-25 FINE GRAIN FILM DEVELOPER (continued)

Therefore, the developer should be tested with your current film before this developer is used extensively. The chemicals in this kit are used to prepare a 1 liter working solution that has a shelf life of two months and is used to process 4 rolls of film. The capacity is extended to 25 rolls per liter by using the replenisher, Formulary DK-25R however, staining and dichroic fog have been reported with modern fine-grain films.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0053	\$13.95
2 liter	01-0054	17.95
4 liter	01-0055	22.95

FORMULARY DK-25R

is used to extend the capacity of D-23 or D-25 from 4 to 25 rolls per liter. As a developer is used, it's action is weakened by both the chemical reduction of the exposed silver halides in the emulsion and by the release of bromide ions into the solution. The net result or reduced developer activity are reduction in the effective film speed and lower contrast. Adding replenisher ensures normal developer activity and partially counteracts the effects of the increased bromide concentration. The shelf life of the replenisher solution is six months.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0057	\$13.95

TECH PAN FILM DEVELOPER

FORMULARY TD-3 TECHNICAL PAN FILM DEVELOPER

An original formulation by William Troop, is a unique, non-Phenidone based film developer offered exclusively by the Formulary. This developer, when used to process Kodak Technical Pan yields negatives with unique clarity, high acutance, and superlative low contrast gradation. With TD-3 development there is a true increase with most developers. The combination of Tech Pan film and TD-3 allows grain less 16x20 prints to be made. An average of 20 rolls of film can be developed with the small kit, 80 with the medium size kit and 120 with the large kit. The shelf life of the stock solutions is one year, the working solution is used only once. Shipped as a liquid concentrate.

To Make a Working Solution	Cat. No.	Price
10 liters (2.5 gal)	01-0065	\$15.95
20 liters (5 gal)	01-0066	20.95
40 liters (10 gal)	01-0067	31.95

PHENIDONE EXTENDED RANGE DEVELOPER (POTA)

is a very soft-working Phenidone-based developer. With low-speed films, POTA is capable of recording 15 to 20 stops of exposure range. When used on fine grain, high contrast copy films, POTA produces negatives with near normal contrast and extremely fine grain. Enlargements of 20-30 times are possible.

This kit makes 1 liter of working solution which has a shelf life of only 1 hour.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0070	\$11.95

FORMULARY MODIFIED POTA (DELAGI #8)

was formulated by Dick Delagi and is designed for Kodak Technical Pan Film. This developer produces negatives with normal contrast and extremely fine grain. These negatives can be enlarged 25 times without noticeable grain in the print. Modified POTA gives better tonal separations with slightly higher contrast than regular POTA. Film speed is ISO 50-80. The kit makes 1 liter of working solution which has a life of 1-2 hours.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0075	\$14.95

FORMULARY FX-1 HIGH ACUTANCE FILM DEVELOPER

is a metol-based film developer, which contains a small amount of potassium iodide. Developer FX-1 produces high-resolution, fine grain negatives, which are suitable for a high degree of enlargement. Normal contrast can be obtained using regular films. Contrast is easily controlled by adjusting the development time. This developer is probably the sharpest developer ever formulated for films from ISO 25-200. Chemicals in this kit are used to make two stock solutions that when diluted will yield 10 liters of working solution with a shelf life of about six months.

To Make a Working Solution	Cat. No.	Price
10 liters (2.5 gal)	01-0080	\$20.95

FORMULARY FX-2 HIGH ACUTANCE FILM DEVELOPER

produces negatives with a high degree of sharpness and normal grain with the capability of interesting internal effects. Due to the greater definition obtainable with FX-2, grain is less apparent than with D-76. Compared with FX-1, FX-2 produces negatives with finer grain and less acutance, but both have distinctly different pleasing effects. FX-2 used as a stand developer for one hour produces the most interesting internal contrast effects of the FX developers.

To Make a Working Solution	Cat. No.	Price
10 liters (2.5 gal)	01-0085	\$22.95

FORMULARY TFX-2 HIGH DEFINITION DEVELOPER

TFX-2 is an updated proprietary modification of the popular FX-2 developer. A number of small modifications have been made to grain better performance with the most modern films including the T-grain films. TFX-2 offers an extremely high degree of sharpness, which is at least as great as the Beutler developer, although somewhat less than FX-1. However, gradation with TFX-2 is much more pleasing than with either Beutler or FX-1. TFX-2 offers a speed increase between on half and one full stop and has an exceptional resistance to streaking. This is one of the most versatile film developers on the market today. By varying dilution, agitation and development time an extremely wide variety of contrast effects can easily be obtained. The stock solution will make up to 10 liters depending upon the dilution used, and has a shelf life of 1 year in a full well-capped bottle. The working solution is a one shot developer with a life of a few hours. Shipped as a liquid concentrate.

To Make a Working Solution	Cat. No.	Price
10 liters (2.5 gal.)	01-0090	\$18.95
20 liters (5.25 gal.)	01-0091	28.95
40 liters (10.5 gal.)	01-0092	45.95

FORMULARY WINDISCH CATECHOL FILM DEVELOPER

is a Catechol-based compensating film developer and produces low to normal contrast negatives, fine grain, and high resolution. (Continued in the next column)

FORMULARY WINDISCH CATECHOL FILM DEVELOPER

(continued) With normal film, it is possible to record a range of 15 stops. Results are similar to and slightly better than those obtained with POTA. In addition, the negatives contain more contrast. A decrease of 0.5 to 1 stop in film speed can be expected. The chemicals in the kit are used to make two stock solutions. They are diluted 5:3:200 to make the working solution, which is used once then discarded. A 1 liter kit yields 40 liters of working solution. The shelf life of solution A is six months, and Solution B has a life of 1 month. Two packages to make Solution B are included in the kit.

To Make a Working Solution	Cat. No.	Price
Up to 40 liters (10 gal.)	01-0100	\$21.95

FORMULARY MODIFIED WINDISCH CATECHOL FILM DEVELOPER

formulated by William Troop, contains the same chemicals as Windisch Pyrocatechin but in different amounts. It works especially well with Kodak Technical Pan film giving extremely fine grain, high resolution, and normal contrast. A very high degree of enlargement is possible. Tech Pan film should be exposed between 64-125 ASA for use with this developer. The kit chemicals make two stock solutions that are diluted 5:3:200 to make 40 liters of working solution. The shelf life of Solution A is six months. Solution B has a life of one month. Two packages of chemicals to make Solution B are included in the kit.

To Make a Working Solution	Cat. No.	Price
up to 40 liters (10 gal.)	01-0105	\$14.95

FORMULARY DEVELOPER 50 (DK-50)

is a moderately fast developer for commercial and sheet sizes of Plus-x, and Pan professional films. The developer produces negatives with normal contrast, average to slightly higher than average graininess. May use without dilution.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0110	\$12.95
4 liters	01-0112	33.95
Replenisher	Cat. No.	Price
1 liter	01-0115	12.95

FORMULARY ABC PYRO FILM DEVELOPER

is a classic formula that uses Pyrogallol as the developing agent and is similar to Kodak D-1 and Ansco 45, Formulary ABC Pyro is designed for large format use and produces negatives with normal to low contrast. The grain is low, and acutance high. The negatives have beautiful scale and gradation; however, there is a loss of about 1/2 stop in film speed. The chemicals in the kit are used to make three stock solutions which are combined and diluted to make the working solution. A 1 liter kit yields 10 liters of working solution. The shelf life of the stock solutions is six months. The working solution is used once then discarded.

To Make a Working Solution	Cat. No.	Price
5 liters	01-0120	\$28.95
10 liters (2.5 gal.)	01-0130	41.95

WIMBERLEY'S WD2D PYRO-METOL FILM DEVELOPER

is a Pyrogallol-metol film developer that produces medium-grain negatives with high acutance and normal to lower than normal contrast. Results are similar to Formulary ABC Pyro but without loss of film speed. The chemicals in the kit are used to make two stock solutions which are diluted 1:1:15 for sheet film or 1:1:20 for roll film. (Continued on the next page)

WIMBERLEY'S WD2D PYRO-METOL FILM DEVELOPER

17 to 22 liters of working solution can be prepared from the stock solutions. The shelf life of the stock solution is six months. The working solution is used once and discarded.

To Make a Working Solution	Cat. No.	Price
8 liters	01-0140	\$20.95
16 liters (4 gal.)	01-0150	34.95

WIMBERLEY'S WD2D+ PYRO-METOL FILM DEVELOPER

is a Pyrogallol/Metol/Sodium Carbonate developer formulated by photographer John Wimberley for spectacular results with current black and white negative films. An update of his classic WD2D formula, this new developer maximizes the beneficial effects of pyrogallol to produce negatives that are easy to print and display the following beneficial characteristics:

- Greatly enhanced acutance due to edge effects at tonal boundaries
- A very smooth, long tonal scale
- Unmatched tonal separation, especially in highlights
- Hardening of the film emulsion, reducing susceptibility to scratching
- Fine, unobtrusive grain. Because of its special spectral characteristics, a WD2D+ negative may be printed on either gelatin/silver or platinum/palladium paper. The emulsion of WD2D+ negatives contains a yellow-orange colored dye mask, traditionally called "stain", that is proportional to the density of the silver image. This mask has the effect of raising the contrast of the negative beyond the level produced by the silver image alone. This means that negatives can be developed to significantly lower silver densities, resulting in finer grain and higher sharpness than is possible with conventional developers. When printing on variable contrast papers, this yellow-orange mask avoids the loss of contrast caused by the greenish color produced by some other pyrogallol developers. The full color density of the mask is achieved during development, making an alkaline after-bath and extended washing time unnecessary. WD2D+ consists of two Stock Solutions, A and B, which are diluted with water just before use. It is a one-shot developer, meaning that each batch of Working Solution is used only once.

To Make a Working Solution	Cat. No.	Price
50 liters	01-0155	\$34.95
25 liters	01-0156	20.95
50 liters (dry)	01-0158	34.95

FORMULARY AMIDOL FILM DEVELOPER

is designed for water-bath development of sheet film. Water-bath processing gives excellent separation of shadows and middle-tones while reducing the total contrast. Negatives have medium grain with good sharpness. The chemicals in this kit are used to make 1 liter of working solution which has a 2-3 hour life.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0190	\$15.95

FORMULARY MCM-100 FILM DEVELOPER

contains Catechol and p-Phenylenediamine. MCM-100 produces extremely fine-grain negatives with good sharpness and superb tonal gradation. It is recommended for Tri-X, TMAX and HP5 films; however, it is also excellent with slower films. The contrast can be controlled by development time. The chemicals in the kit will make a working solution with a capacity for six rolls of film. The shelf life of the working solution is six months.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0200	\$20.95
2 liter	01-0201	30.95

FORMULARY FILM DEVELOPER 12

is equivalent to Edwal 12, and is an excellent fine grain film developer that gives full emulsion speed, a full contrast range and superb sharpness. The developer contains p-Phenylenediamine, glycin and metol as the active agents. Developer 12 is not a compensating developer. The negatives are brilliant rather than flat in appearance. Developer 12 reproduces flatter scenes better than other film developers and as a consequence, it is an excellent developer for copying or reproducing negatives. The chemicals in the kit are used to make a working solution with a shelf life of two months.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0210	\$19.95
2 liter	01-0211	25.95

FORMULARY TD-16; IMPROVED D-76

is formulated to duplicate working characteristics of Kodak D-76 precisely. D-76 is probably the most popular black and white developer in the world. It offers optimum balance of speed, fine grain, high sharpness, and good gradation. One important way TD-16 differs from D-76 is consistent results. The pH of D-76 can rise considerably, and contrast is greatly increased. We have worked out a proprietary modification of D-76 that maintains all its desirable working characteristics over a period of six months. To make 2 liters of working replenisher, use catalog number 01-0273.

To Make a Working Solution	Cat. No.	Price
1 - 4 liters	01-0270	\$9.95
4 - 16 liters (1 - 4 gal.)	01-0271	14.95
8 - 32 liters (4 - 8 gal.)	01-0272	19.95

FORMULARY TD-16R REPLENISHER

functions identically to D-76R, except that it is much more consistent in use. D-76R if mixed too vigorously and stored, shows a significant rise in contrast. This is eliminated in TD-16 or TD-16R. Otherwise image quality, grain and speed remain the same.

To Make a Working Solution	Cat. No.	Price
1 liter	01-0273	\$11.95

FORMULARY DIVIDED D-76 FILM DEVELOPER

is an economical metol-hydroquinone film developer. Films developed in Divided D-76 have normal grain, good sharpness, and excellent tonal gradation. This developer is a two bath compensation developer. The chemicals in the Divided D-76 are used to prepare two working solutions. The film is placed in solution A for 3 minutes, and then in solution B for 2-4 minutes, depending on the film and contrast desired. Solution A contains the developing agents, and solution B contains the alkali. Development begins when the film is placed in solution B and lasts until the developing agents retained on the film back are exhausted. This method of development holds back the highlights and brings out the shadow detail. The film speed is not reduced. The shelf life of solution A is 2 months, and solution B is a one shot solution.

1 liter	01-0300	\$13.95
2 liters	01-0302	16.95
4 liters	01-0304	20.95

FORMULARY BW-2 T-MAX DEVELOPER

is unique, giving the TMAX film the sharpness it was meant to have. BW-2 allows you to have contrast control other developers do not give by using a different balance of the two solutions.

(Continued on the next page)

FORMULARY BW-2 T-MAX DEVELOPER

(Continued)BW2 is a proprietary formula developed by Bill Wilson of Photographers' Formulary. Do to its popularity, this kit comes pre-bottled as a liquid stock solution for your convenience. The working shelf life of 1 week. The concentrate will keep for 1 year if kept tightly capped.

To Make a Working Solution	Cat. No.	Price
2.5 liters	01-0500	\$12.95
5 liters	01-0505	18.95

20 liters (5 gal.)	01-0510	35.95

REVERSAL PROCESS FOR T-MAX FILM

is the formula developed by Hans F. Dietrich and appeared in the March/April 1988 issue of Darkroom Techniques. The T-MAX reversal process allows black and white slides to be made from T-MAX 100 or 400 black and white negative film. The reversal process will produce excellent positives from one to two stops higher with the same development time; however negatives will be a thin positive. The kit makes five solutions (2 developers, bleach and a clearing bath). This kit will develop 4 rolls of film.

To Make a Working Solution	Cat. No.	Price
to develop 4 rolls of film	01-0600	\$35.95

FORMULARY BW-44 LIQUID FILM DEVELOPER

was formulated because of the calls the Formulary had been receiving for liquid pre-mixed formulas for film, paper, and fixing. We feel that the BW-44 is a very good developer with all films. The life of the stock solutions is 1 year in tightly capped bottles. This formula uses A & B stock solutions. You can expect to get 10-15 rolls of film per liter of developer at a 1:1:5 dilution. The working solution has a life of 2 weeks. BW-44 is a high capacity developer and very suitable for large or small format. This formula should give the very best in shadow detail and sharp highlights. You can vary the dilutions from 1:1:1 up to 1:1:20.

To Make a Working Solution	Cat. No.	Price
5 liters (1.25 gal.)	01-0800	\$12.95
10 liters (2.5 gal.)	01-0810	15.95
20 liters (5 gal.)	01-0811	22.95
40 liters (10 gal.)	01-0812	33.95

FORMULARY KODALITH DEVELOPER

is a high-contrast hydroquinone developer, that produces dense blacks, clear highlights, and sharp edge separation similar to Ansco 70. The kit contains chemicals to make 2 stock solutions that are mixed 1:1 to make the working solution. Solution A is stable for six months, and solution B lasts one month. Enough chemicals for 2 batches of solution B are included.

4 liters	01-1330	23.95
8 liters	01-1350	28.95

PYRO TRIETHANOLAMINE FILM DEVELOPER

is a formula published in Petersen's Photographic, July 1984 issue. Written by Paul Farber, the demand was so great for this developer, we made the kit with permission. Mr. Farber stated in his article that this developer was intended for the production of large negatives, but has also proved exceptionally good on small format. It has smooth grain structure and full emulsion-speed capability. (Continued in the next column)

PYRO TRIETHANOLAMINE FILM DEVELOPER

(Continued)It lasts longer than other developers and can be replenished just by adding fresh developer to make up the lost volume, and this can go on for years.

To Make a Working Solution	Cat. No.	Price
8 liters	01-5000	\$32.95

BARRY THORNTON'S EXACTOL LUX FILM DEVELOPER

is a unique developer of special interest to artists and photographers wishing to produce monochrome fine prints, is from the same stable as *DiXactol Ultra*, and has the same distinguishing characteristics. Clean working; it produces the fullest palette of richly graduated tones, especially in the holding of translucent and delicately drawn highlights particularly resistant to 'blocking up' at high exposure levels. At the same time, shadow detail and separation are nursed up to unusual levels. Printing is likely to need significantly less burning in, in landscape skies, for instance, and graduation is likely to be markedly superior in these burned-in areas. Discriminating workers appreciating the fine separation of tones should find this a fulfilling developer.

DiXactol®

is a unique developer of special interest to artists and photographers producing monochrome fine prints, yet it is also uniquely tolerant and easy to use. It has four main distinguishing characteristics. It produces the fullest palette of richly graduated tones, especially in the holding of translucent and delicately drawn highlights particularly resistant to "blocking up" at high exposure levels. At the same time, shadow detail and separation is nursed up to unusual levels.

Description	Cat. No.	Price

PMK FORMULA

was developed by Gordon Hutchings, and is designed as a universal developer for a wide variety of modern emulsions used under diverse conditions. PMK stands for "Pyro-Metol-Kodalk". Kodak has changed the name Kodalk™ to Balanced Alkali™ - this is their proprietary name for sodium metaborate. The formula is constituted to achieve the best overall results in consideration of the following technical criteria: sharpness, maximum image stain, minimum general stain, edge effects, film speed, flexibility for Zone System Plus and Minus development, stability, repeatability, convenience of use and long shelf-life. An alkaline fixer solution such as TF-4 (see page 11) is recommended for achieving maximum pyro stain on the negative. A conventional rapid fix may diminish staining effects of pyro and PMK formula. The PMK formula consists of two stock solutions. The "A" stock is the developer agents and the "B" stock is the alkali, or accelerator. Our stock solution dilutes to make 25 or 50 liters of working solution.

ABC PLUS PYRO (ROLLO PYRO)

is a formula developed by Harold Leban specifically for rotary processing in Jobo® equipment or BTZS® tubes. Thanks to Carl Weese for his painstaking testing and allowing us to use his information in our instruction sheets. The testing was done on several hundred negatives under a wide range of lighting conditions, being developed in Jobo® Expert drums. The results were clean negatives that can be processed in fairly short times at a relatively low (70°F) temperature in a single batch of chemistry. This formula however does not perform well in tray development because it produces a strong silver image with very little stain.

33 liters	01-5070	\$28.95

Fa-1027 FILM DEVELOPER

is a highly concentrated, high-acutance film developer, that performs beautifully with all black and white films. It is a liquid which dilutes either 1:9 or 1:14. Among its characteristics are: the ability to produce an optimum negative with any black and white film, whether standard, random grain as found in HP -5, FP-4, Pan F, Tri-X, etc., or fabricated T-Grain films such as Ilford Delta 100, Kodak T-Max, Agfa Acros. You get the same, full information negative, only the development times change. The grain is very fine, but also very sharp. There is no soft grain fuzziness that is apparent from low activity, sulfite action, fine grain developers like D-23, D-25, Microdol-X, etc. There is no developing action on unexposed silver which creates excess fog you have to print through (as with DD-X), which can be troublesome in printing. Printing times with FA-1027 require half the exposure time they do with Ilfotec DD-X. FA-1027 maintains a precise balance between Phenidone and the developing agent Hydroquinone. It also utilizes 2 restrainers, Potassium Bromide and Benzotriazole. This accounts for its remarkable performance.

10 liters (Liquid)	75-0010	14.95

DI #13 BY PHIL DAVIS

This developer is ideal for subjects from normal (7-stop) to extremely long (10+ stops) range when increased shadow contrast and reduced mid-tone contrast are desired. It has been formulated specifically to take advantage of the unique characteristics of Kodak T-Max 100 film and is not recommended for use with any other film material. DI #13 provides low to very low contrast with excellent shadow detail, while maintaining relatively high film speed. Not recommended for expansion development.

5 liters	01-5075	\$24.95

HARVEY'S DEFENDER 777

seems to work best at 75° F and above, and is best used in large quantities (big tanks). It changes a little after the first few rolls and a new batch should be ripened with a few unimportant rolls --it will then be stable for years. It really lasts well, even though visually it is not confidence-inspiring. Murky is normal. It is hard to mix, and the initial mixing is critical. Agitation is quite important--do it the same every time.

4 liters	01-5086	35.95

PYROCAT-HD FILM DEVELOPER

Pyrocat-HD is a semi-compensating, high-definition developer, formulated by Sandy King as an alternative to PMK. The advantages over PMK that Mr. King cites for his formula include an approximately 1/3-stop greater effective film speed, 10-15% shorter development times, more consistent staining action, lower toxicity, and no streaking or mottling with reduced agitation.

PAPER DEVELOPERS

Photographers' Formulary offers a wide variety of paper developers. Each developer produces its own unique effect and the differences between any two developers ranges from subtle to dramatic. Variation in contrast, tone, depth of blacks, can be expected. The general characteristics and effect of any of these developers are described. The exact effect of any of these developers depends upon the negative, paper and manner in which the developer is used.

FORMULARY WESTON'S AMIDOL PAPER DEVELOPER

is one of the best in its class. Prints have neutral to cold tones with good crisp tonal separation and deep blacks. The working solution can be diluted to obtain softer results without greatly affecting the color. Bromide paper should be used with this developer for best results. The chemicals are used to prepare one stock solution. Solid amidol is added to make the working solution. Since amidol is very short-lived in solution, several packages are included in the kit. The stock solution has a shelf life of six months, when amidol is added only 2-3 hours.

To Make a Working Solution	Cat. No.	Price
1-10 liters	02-0010	\$24.95
2-20 liters (0.5 - 5 gal.)	02-0020	29.95
4-40 liters (1 - 10 gal.)	02-0021	54.95

FORMULARY AMIDOL PAPER DEVELOPER

is similar to Ansco 113 and is an alkaline-based amidol developer. The prints resulting from Formulary Amidol Paper Developer are very similar to those obtained using Weston's Amidol Paper Developer - - cold tones and deep blacks. If you have used and like the results of Weston's Amidol, you should try this formula. Formulary Amidol developer works best with bromide papers. This developer can be used with or without dilution. Without dilution the prints have high contrast and with dilution the contrast is diminished. The shelf life of the stock solution is six months; when amidol is added only 2-3 hours. This kit contains several small packets of amidol so that you can mix small volumes of working solution.

VERSAPRINT II

is a glycin-based developer which replaces our old VersaPrint developer. Like the original VersaPrint, this developer allows great flexibility when printing. Unlike the old formula, VersaPrint II will achieve superior prints with a greater variety of printing papers; specifically, achieving the maximum black of the paper. Also, VersaPrint II at its recommended dilution will obtain the maximum black of the paper with a shorter development time - 2 minutes. It contains no sequestering agents, which impair a developers ability to achieve a good black. VersaPrint II also imparts fine prints with more of that characteristic "glow" and "shimmer"- typical of glycin developers - than the original formula. One liter of stock solution will process 50 8x10 prints. The stock solution of VersaPrint II is very stable and will last 6 months. You can even reuse the working solution until it has been used to capacity. The unique performance feature of VersaPrint II is the flexibility it allows.

To Make a Working Solution	Cat. No.	Price
1 liter	75-0030	\$26.95

FORMULARY 106 WARM TONE PAPER DEVELOPER

is equivalent to Edwal 106 and Ansco 115. It is a glycin and hydroquinone based developer. Developer 106 is a specialty developer and is popular for the reproduction of old photos. Formulary developer 106 produces warm blacks to engraving brown on chlorobromide papers. The final color of the print depends upon the dilution of the stock solution. The prints have normal tonal separation and normal to low contrast. The chemicals in Formulary 106 are used to make a stock solution which is diluted 1:7 or up to 1:15 depending on the warmth of the tone desired. The stock solution is stable for 3 to 4 months.

FORMULARY BW-65 LIQUID PAPER DEVELOPER

is a Phenidone - glycin - based paper developer that produces a full scale of rich blacks. This developer has a long shelf life, excellent tray life, high capacity, and does not contain metol. The prints obtained with this developer are very close to those of amidol prints, but without the staining problems. The amount of working solution you will get per kit depends upon the dilution used. BW-65 is similar to F130 but is a liquid A & B stock solution formula with a very fast speed of development. At a 1:1:1 ratio, development in 15-30 seconds with full blacks is possible. At a 1:1:10 dilution you may obtain full black in 5-7 minutes.

OUR BEST SELLER!

FORMULARY 130 PAPER DEVELOPER

is a superb paper developer that produces a full scale of rich blacks. The developer has an excellent shelf life, high capacity and is very suitable for batch processing. The prints obtained with F130 are surpassed only by the Amidol Developers, however F130 is much more pleasant to work with. We feel F130 is one of the best developers ever formulated. The chemicals in Formulary 130 make stock solutions which are diluted 1:1 with water to make the working solution. The stock solution is stable up to 6 months. A capacity of about 50 8x10 prints can be expected for 1 liter of working solution.

DR. BEERS' VARIABLE CONTRAST PAPER DEVELOPER

is a two-stock solution paper developer. Stock solution A contains metol, a soft developer; and solution B contains hydroquinone, a contrast developer. Dr. Beers' paper developer is unusual because the contrast of the print is controlled by varying the relative amounts of the two stock solutions that are combined and diluted to prepare the working solutions. Thus, Dr. Beers' is not a single developer, but a combination of developers whose results can be varied from soft to high-contrast. For a specific grade of paper, the contrast can be varied about 1.5 paper grades. The prints have good blacks and neutral tones with fine separation. The stock solutions are diluted 1:1 to obtain the working solution. The shelf life of the stock solution is 3 to 4 months, but the working solution must be discarded at the end of the working session. A 1 liter kit makes 2 to 3 liters of working solution, depending on the dilution used.

To Make a Working Solution	Cat. No.	Price

LIQUIDOL DEVELOPER, from Bill Troop and Ron Mowrey, is a revolutionary new print developer that features exceptionally long shelf life, tray life, and high capacity, along with the convenience of a 1:9 liquid concentrate. Fine printers will also appreciate that this developer has considerably more flexibility in over- and under-development than most print developers. This feature is limited when using the many papers which include incorporated developing agents. But when using papers which do not have incorporated developing agents, demanding printers will appreciate the extra dimension of flexibility and control this developer offers. Liquidol has been carefully designed to replicate the appearance of prints developed in industry-standard Dektol®, yet to provide enhanced shadow separation. Other advantages are full development within 60 seconds at 1:9 dilutions. We invite users to experiment with different times and dilutions. We think you really will be surprised by the flexibility and dependability Liquidol offers.

PERFECTA-D is a highly concentrated, neutral tone Phenidone-Hydroquinone formula. Unlike other liquid concentrate developers, Perfecta-D Print Developer will obtain the maximum black of the paper. The standard dilution is 1:7, and the shelf life of the concentrate is at least 2 years. Amazingly, this developer is both stable, long lasting, and a superior performer. Sequestering agents are added to developer to help them mix well - they isolate things in water, like magnesium, calcium, iron, etc. They usually impair the developers ability to produce a strong black, as will the addition of extra sulfite. Perfecta-D Print Developer contains sequestering agents as well as the additional sulfite, yet it will still obtain maximum black and yield a clean, full tonal scale. Perfecta-D is, amazingly again, quite good with old technology papers as well, like Elegance, although it does not provide the glycin "glow" of VersaPrint II, nor the flexible development options.

FIXERS

Following exposure and development of the negative or print, the undeveloped silver salt must be removed to prevent eventual darkening or staining. Kits for rapid fixing, standard fixing, and archival fixing are offered. In addition, fixers are available with or without hardeners

FORMULARY FIXER 24

EXCELLENT FOR USE WITH PMK & OTHER PYRO FILM DEVELOPERS.

Fixer 24 is non-hardening sodium thiosulfate fixer. Without hardener, prints are easier to wash, tone, and spot. Prints are fixed in two successive fixing baths requiring 3 to 5 minutes in each bath. The chemicals in this kit are used to make a working solution which has a shelf life of 2 to 4 months. One liter fixes about 25 8x10 prints.

TF-4 ARCHIVAL RAPID FIXER

EXCELLENT FOR USE WITH PMK AND OTHER PYRO FILM DEVELOPERS.

TF-4 is an extraordinary fixer for both paper and some films. TF-4 works well in batch processing, fixing resin coated paper in 30 seconds and fiber based paper in 60 seconds. You can also use TF4 on TMAX films, fixing for 6 minutes to remove the magenta stain. We recommend 20 rolls of film to 1 liter working solution. TF-4 does not require a stop bath nor a hypo clearing agent, and has little odor when mixed with distilled water. TF-4 is a non-hardening fixer which makes it excellent for prints that are to be toned or retouched. Most modern film emulsions have built-in hardener, eliminating the need for hardener in the fix. The stock solution which has a shelf life of 1 year is diluted 1:3 to make the working solution. The working solution has a shelf life of 6 months.

HYPO CLEARING AGENT, STOP BATHS, TEST SOLUTIONS

FORMULARY TAF-1 PRINT DEVELOPER IMPROVER

is a formula that, when added to any print developer, changes the typical image tone the print creates, from a greenish black emphasis to a blue-black emphasis. It can also be used to rescue out of date enlarging papers.

To Make a Working Solution	Cat. No.	Price
1 liter	03-0147	\$8.95

FORMULARY HYPO CLEAR AGENT

aids in the archival process, based upon ion exchange: ions absorbed onto a solid film or paper can be replaced by ions of a solution such as those found in the Hypo Clear solution. The net effect is that the absorbed thiosulfate ions of the hypo (difficult to remove by a water wash) are replaced by sulfite ions (readily removed by a water wash). Hypo Clear does not decrease the total number of ions absorbed on the paper, it merely exchanges those ions originally on the film or paper with those of Hypo Clear. Washing after the use of Hypo Clear is IMPERATIVE. The chemicals in this kit are used to make the stock solution which is diluted 1:9 to make the working solution.

TEST YOUR WASH TIMES

WE OFFER 3 TEST SOLUTIONS!

One to test prints for residual hypo; a second to test prints for residual silver; and a third to help determine if a fixing bath has been exhausted.

FORMULARY RESIDUAL HYPO TEST

A simple chemical test that can be used to determine if a print or film strip has been adequately washed. The test is based upon the formation of a yellow stain of silver based upon the formation of a yellow stain of silver sulfide – silver thiosulfate on the white of a test print (or the clear area of a negative film strip) when the test solution is applied. The test will give accurate results if the print or film has been treated with Hypo Clearing agent and washed in water or just washed in water. The test WILL NOT give accurate results if Hypo Eliminator has been used in the washing procedure. Hypo Eliminator contains ammonia which complexes with the silver ions in the Residual Hypo Test Solution decreasing their effective concentration.

1000 ml	03-0161	46.95

FORMULARY RESIDUAL SILVER TEST

is used to determine if any silver ions remain in a print or on a film strip after fixing. When the silver test solution is applied to photographic material the sulfide ions in the solution react with any residual silver ions in the material forming a yellow stain indicating the fixing process is inadequate. The chemical in the kit makes a stock solution which is diluted 1:9 to make more than 1 liter of working solution. The stock solution shelf life is 3 months, although the working solution lasts only 1 week.

Description	Cat. No.	Price
10 liters (2.5 Gal)	03-0170	\$12.95

IS YOUR FIX FIXING?

FORMULARY FIXER TEST SOLUTION

is used to tell when a fixer bath has become exhausted by accumulating excess silver ions. Unlike developing solutions, which discolor when they are exhausted, fixer baths show no outward appearance when they are spent. Therefore it is necessary to either keep an accurate count of the number of prints or rolls of film fixed or test the fixer solution periodically to determine when it has become exhausted. Fixer Test Solution provides a simple chemical test that allows you to determine when the fixer solution is exhausted and must be replaced. The chemicals in this kit are used to prepare the test solution which has a shelf life of one year.

Description	Cat. No.	Price
100 ml	03-0180	\$12.95

DRY FERRIC OXALATE

Ferric Oxalate Dry Pack :

Just add 25 ML of distilled water and shake well.

Description	Cat. No.	Price
Ferric Oxalate 6.8g dry	10-0535	\$7.50

A dry packet of Ferric Oxalate for you to mix in your own container.

Description	Cat. No.	Price
Ferric Oxalate 10 G	10-0536	\$9.00
Ferric Oxalate 100 G	10-0538	\$64.00

PLAIN HYPO FIXER

Plain Hypo is the optimum second fixing bath. Most unexposed silver halide is removed by the first fixing bath, and the second bath finishes the job. Also recommended as a second fixing bath prior to toning. The pH of a mixed Plain Hypo solution is slightly above neutral pH (not acid), so if used in combination without Alkaline pH fixers, all the fixer washes out easily.

Since it is used at nowhere near its capacity, this solution can be reused and lasts a long time. Testing procedure for re-use is included. Sold in 4 package sets. Each package makes 2 liters.

Description	Cat. No.	Price
4 pkg set	75-0060	\$21.50

ART FIX

is an Alkaline pH Sodium Thiosulfate Fixer. Why should you use an alkaline pH fixer? Because chemically, acid fixers impregnate harmful particles in emulsions and paper fibers, and precipitate thiosulfuric acid in solution (which causes "sulfiding" in prints - brown spots); acid fixers also "bleach" prints and negatives - actually removing image silver in low values in negatives and high values in prints. In Pyro-developed negatives, acid fixers will remove whole areas of image stain. Acid fixers also physically shrink emulsions and papers, trapping fixer particles in there, making them very hard to wash out. Art Fix has none of the bad habits of an acid fixer: it does not imbed harmful particles into the emulsion and paper fibers; it will not remove image silver from the negative or print; it cannot cause sulfiding; and it does not cause shrinkage in emulsions and paper fibers, which will physically trap fixer in there. Art Fix is completely odorless, extremely gentle to work with, and washes out very fast. It is the best possible fixer for use with Pyro-developed negatives, and is a true archival fixer with fiber base papers. Used as recommended it will process 160 double weight 8x10 prints. Art Fix utilizes a 30-45 second fresh water stop bath. Do not use an acid stop bath with this product - it will interfere with the maintenance of an alkaline pH in the processing sequence.

Description	Cat. No.	Price
1 gal.	75-0040	\$10.97
3 gal.	75-0050	29.65

FORM-A-FLO

This solution decreases water surface tension; takes away water streaks on film and aids film in drying faster. Use 4 drops per roll of film—do not squeegie.

Description	Cat. No.	Price
4 oz. bottle	03-0195	\$4.95
8 oz. bottle	03-0196	6.95

ALTERNATIVE UV LIGHT BOX

UV light boxes for the alternative processes, large enough to expose images up to 20x24". When it's dark outside, or when the sun refuses to shine, these will give you consistent, predictable results. No more ruined prints because the sun decides to hide behind a cloud, no more extended exposure times because you live above the Arctic Circle.

The light boxes are powered by (12) 24" UV tubes, which are shipped with the unit. Lightboxes are a special order item and do not qualify for free shipping when available. Please allow extra time for construction.

Description	Cat. No.	Price
UV Light Box	12-0590	\$795.00

HOLOGRAPHY DEVELOPERS

The word "holography" is derived from Greek roots that mean "entire picture." A hologram is the final product of practicing holography. But what is it?

A hologram has been said to be a window with memories. On or near the apparently blank window (piece of glass) an object was present some time in the past. When the glass is properly illuminated by a spotlight, an image is recreated in three dimensions, as if the object had been brought back to the window, you can see an entire image by looking through only part of a hologram.

There are two basic types of holograms. The "white light reflection," or "reflection," hologram can be viewed with a white spotlight as if it were a painting. The "transmission" hologram requires a light source (sometimes a laser) from behind. Then there are numerous hybrids that combine many different techniques to serve particular functions.

Holograms now serve a purpose on credit cards to discourage counterfeiting; on magazine covers to present three-dimensional images; in checkout counters to scan the bar codes; in art galleries to exhibit multicolor concepts; in laboratories to perform nondestructive testing; in precision measurements; in aircraft to allow pilots to read instruments without taking their eyes off the target; and even in electronic circuits and computer-generated optical elements to perform difficult and otherwise impossible functions."

The Formulary would like to thank Dr. Jeong for allowing us to copy our introduction for Holograms, from his book, "LASER HOLOGRAPHY Experiments You Can Do ... From Edison" and for his outstanding work in the Holography field.

Photographers' Formulary offers five pre-scaled kits suitable for either the classroom student or the hobbyist.

HOLOGRAPHY FILM DEVELOPER JD-2

is a developer for both transmission and reflection holograms. It is relatively safe, even for the home hobbyist, and is recommended by Dr. Jeong of the Lake Forest College holography workshops of Lake Forest College.

When making white light reflection holograms with a He-Ne laser, this process allows you to control the color of the image from red to blue depending upon the exposure. Under-exposure yields red; over-exposure yields blue. Correct exposure yields a gold color.

Description	Cat. No.	Price
1 liter	04-3010	\$18.95
10 liters	04-3011	105.95

HOLOGRAPHY FILM PROCESSING KIT JD-3

was developed and is used in the Lake Forest College holography workshops of Lake Forest College. It is highly recommended by its director, professor Tung H. Jeong, because it not only gives superior results for both reflection and transmission holograms made on Agfa Holotest-type film and plates, but it is safer to use than JD-2 by hobbyists and schools. Unlike JD-2 it does not contain potassium dichromate and sodium bisulfate. The added post treatment using vitamin c turns the hologram to a reddish brown color which reduces scatter noise and prevents print out.

Description	Cat. No.	Price
1 liter	04-3020	\$18.95
10 liters	04-3025	105.95

HOLOGRAPHY FILM PROCESSING KIT GP-2

is the latest formulation from Professor Tung H. Jeong of Lake Forest College. The GP-2 developing procedure is most suitable for the Russian produced PFG-03M fine grain emulsion are discussed in the book Silver Halide Materials for Holography and Their Processing by Dr. Hans Bjelkhagen, and published by Springer-Verlag. The book and materials are distributed by Integraf.

Description	Cat. No.	Price
1 liter	04-3030	\$18.95

HOLOGRAPHY FILM PROCESSING KIT JD-4

JD-4, A New Way to Process PFG-03M Plates and Film: It is well known that PFG-03M emulsion records the brightest and clearest reflection holograms. JD-4 is a newly discovered processing regime for the PFG-03M emulsion. Its main features are: (1) it increases the sensitivity of PFG-03M to the same level as PFG-01, i.e., the exposure time can be one-tenth as long as before; and (2) the exposed hologram can be developed in 20 seconds and bleached in less than one minute. Also, the finished hologram can be quick-dried using warm air. Furthermore, JD-4, compared to any other processing regime, uses chemicals with lowest toxicity and volatility. Its main developer is ascorbic acid and its main bleach is copper sulfate. Using the PDF-03M and JD-4 combination, one can now make bright and clear reflection and transmission holograms using low output lasers, such as a diode laser from Integraf, and finish the experiment within a short time.

The PFG-03M materials are distributed by INTEGRAF (Phone (847) 234-3756).

Description	Cat. No.	Price
1 liter	04-3040	\$18.95
10 liters	04-3045	105.95

HOLODEVELOPER 602

was given to us by Hans Bjelhaugen from Lasergruppen Holograf AB, Stockholm, Sweden. It is a developer for reflection holograms in particular; made for Agfa Holotest 8 E7 5HD material.

The developer works well for Denisyuk type reflection holograms using both He-Ne or Krypton CW lasers or pulsed ruby lasers. The exposure depends on the laser used but is around 100 uJ/cm².

HD-602 works very well giving a high signal-to-noise ratio and high diffraction efficiency. The developer is completely stable as long as Part A and Part B are not mixed, and remains stable after being mixed for several weeks. One liter of mixed developer can be used to do 100 4x5 plates.

A reversal "Pyrochrome Bleach" is included in this kit. Chemicals will make 1 liter of three solutions.

Description	Cat. No.	Price
1 liter	04-3050	\$43.95

REDUCERS, INTENSIFIERS, ADDITIVES

Reducers and intensifiers are useful for adjusting negative contrast and correcting development mistakes. They can save bad negatives and improve good ones. Reducers and intensifiers are helpful for increasing brilliance, clearing highlights, and opening shadows in prints.

FARMER'S PROPORTIONAL REDUCER FORMULARY REDUCER 1 FOR NEGATIVES

is a hypo-potassium Ferricyanide negative reducer, which is similar to both Kodak R-4a and Kodak R-4b. The chemicals in the kit are used to make two stock solutions. Depending upon the relative amounts of the two stock solutions that are used to make the working solution, Reducer 1 can act either as a sub proportional or as a proportional reducer. A sub proportional reducer removes silver metal from low density areas faster than it does from the high-density areas. This mode of removal improves over-developed negatives. Working solution amounts depend upon the dilution you use.

Description	Cat. No.	Price
1 liter	05-0010	\$18.95

FORMULARY REDUCER II FOR NEGATIVES

is a Persulfate reducer that is similar to Ilford IR-2. Reducer II is a super proportional reducer and removes silver from the dense areas of the negative faster than it does from the faint areas. The net result is a DECREASE IN NEGATIVE CONTRAST.

The chemicals in the kit are used to make 1 liter of working solution and 1 liter of an after-bath solution containing sodium sulfite.

Description	Cat. No.	Price
1 liter	05-0020	\$17.95

FORMULARY REDUCER III FOR NEGATIVES

is a potassium permanganate-ammonium Persulfate reducer that removes silver metal from the negative in approximate proportion to its existing density. In this respect, the action of Reducer III is like development in reverse. The net effect is that the OVERALL DENSITY OF THE NEGATIVE IS DIMINISHED.

The kit contains chemicals to make two stock solutions of 1 liter each. The working solution is prepared just prior to use. Sodium Metabisulfite is included in the kit for an after-bath.

Description	Cat. No.	Price
3 liters	05-0030	\$18.95

FORMULARY REDUCER IV FOR NEGATIVES

is similar to Ansco 311. It is not a true reducer; rather it is only a bleach. The chemicals in this kit are used to convert the silver metal in the negative back to a silver halide which then can be reconverted to silver metal in a redevelopment step. Any standard developer can be used for the redevelopment.

The chemicals in this kit are used to prepare 1 liter of working solution, which is reusable. The working solution keeps well and has a high capacity.

Description	Cat. No.	Price
1 liter	05-0040	\$13.95

FORMULARY SPOTTING REDUCER II FOR PAPER

is simply the classical Farmer's Reducer. The solution acts by conversion of the silver metal in the print to silver bromide. The reducer can be used to eliminate an unwanted dark spot in a print due to a flaw in the negative; to reduce the contrast; white out a portion of the print or reduce the print as a whole. The chemicals in this kit are used to prepare two stock solutions, which can be stored for a considerable amount of time. The working solution is prepared just prior to use and used only once.

To Make a Working Solution	Cat. No.	Price
375 ml	05-0060	\$12.95

FORMULARY CHROMIUM INTENSIFIER FOR NEGATIVES

Formulary Chromium Intensifier increases the density of black and white negatives. This is a proportional intensifier. The amount of intensification is somewhat proportional to the amount of silver originally present in the negative. Negatives intensified with chromium are stable. The process is used in room light and must be redeveloped in a quick-acting print developer. Chemicals are used once and discarded. Additional intensification may be obtained by repeating the process. Not for T-grain emulsions (see Silver Intensifier).

Description	Cat. No.	Price
1 liter stock makes 2.75 gallons	05-0065	\$17.95

FORMULARY TAF-1 PRINT DEVELOPER IMPROVER

is a formula that, when added to any print developer, changes the typical image tone the print creates, from a greenish black emphasis to a blue-black emphasis. It can also be used to rescue out of date enlarging papers.

To Make a Working Solution	Cat. No.	Price
1 liter	03-0147	\$8.95

.....
**The Formulary recommends
distilled water for
all solutions!**

Results cannot be guaranteed if distilled water
is not used.
.....

**FORMULARY SILVER INTENSIFIER FOR
NEGATIVES**

is similar in composition to Kodak IN-5. The intensifier acts by depositing additional silver on an underdeveloped negative. The results are permanent, and the new grain is surprisingly fine. Although expensive, this intensifier is probably the best that has been formulated. The chemicals in the kit are used to make 4 stock solutions, which are mixed just prior to using. The negative is intensified in room light to the degree desired and then washed. The stock solutions are stable for months, but the working solution is usable for only 1/2 hour after mixing. Works with T-grain emulsions.

To Make a Working Solution	Cat. No.	Price
1.5 liters	05-0070	\$62.95
3 liters	05-0080	92.95

**RECOMMENDED FOR
PUSH PROCESSING**

EXCEL FILM ENHANCER

will give your favorite film developer increased shadow detail, and film speed, while reducing the grain and developing time. It gives crisp, easy to print negatives without blocking the highlights. EXCEL is an easy to use non flammable liquid concentrate, which can be used with diluted or undiluted developers by keeping the ratio of 30 ml per liter. Excel is excellent for low light photo sessions and improves push processed films. Shelf life is 1 year in a tightly sealed bottle.

Description	Cat. No.	Price
4 oz. Bottle	05-1000	\$ 9.95
32 oz. Bottle	05-1010	18.95

CRONE:C ADDITIVE

converts D-76 to C-76 by the addition of one ounce of additive to a liter of D-76. The boost given by Crone:C Additive improves shadow detail, even with the recommended shorter development. This time-cut helps to limit grain growth. It preserves sharpness and protects you film and still give easy to print negatives. Crone:C is a liquid concentrate and has a shelf life of 1 year.

• CLEANERS •

CLOTHING STAIN REMOVER

Our popular kit is now made into a convenient 8 oz squirt bottle. Already pre-mixed for your convenience this product works on developer and fixer stains on most materials. This product has been known to take stains out that were several years old. Testing on a particular stain and fabric combination is recommended before using.

Description	Cat. No.	Price
8 oz. Bottle	05-0105	\$ 13.95
64 oz. Bottle	05-0106	41.95

**PRO-LINE GENERIX PHOTOGRAPHIC
EMULSION CLEANER**

is completely safe for use on both black and white and color materials: slides, negatives and prints (including Cibachrome). Generix easily removes finger oils, grease pencil, adhesive residue, mildew, ball-point ink, smoke and soot damage and most permanent inks. This cleaner has a neutral pH, is archival, and will leave no residue to adversely affect dye stability, and dries instantly. It is recommended for use with silver-based emulsions and is not to be used on non-hardened gelatin or albumen emulsions.

Description	Cat. No.	Price
1 oz. Pump spray bottle*	05-0145	\$4.95
32oz. Refill	05-0140	\$39.95

HANDI PADS

are a 100% pure cotton, non woven fabric. They are lint less, soft, economical, absorbent and won't scratch. They are ideally suited for cleaning photographic film and print emulsions. Handi-Pads are so soft they can be safely used to clean all types of sensitive surfaces : scanners, CD's, mirrors, lenses, telescopes etc.

TONERS

The emotional impact of a print can be dramatically modified by toning. When a print is toned, the silver in the image is exchanged, to an extent, with another metal or with an inorganic salt. The end result can be exquisite. In addition, toning can often increase the permanence of the print. Photographers' Formulary offers a large variety of toners. Since the final print color, in part, is determined by your printing materials and methods, the toners are described in general terms.

FORMULARY COPPER TONER

contains copper sulfate, potassium ferricyanide, and potassium citrate which results in an image toned with copper metal. The toner produces a variety of colors ranging from warm brown through coppery hues to chalk red. The exact color obtained depends on the length of toning time. The process is rapid and progressive. It is possible to remove the print from the bath at any stage of its toning. Although fiber based papers work best, resin coated papers will work nicely also. The chemicals contained in the kit are used to make two stock solutions, which are mixed in equal volumes to obtain the working solution. The stock solutions are stable for a reasonable period of time, but the working solution should be discarded after use.

To Make a Working Solution	Cat. No.	Price
2 liters	06-0010	\$13.95

FORMULARY IRON BLUE TONER

is an inexpensive and effective blue toner similar to Ansco Toner 241. It is often used on snow scenes and seascapes. Prints are toned in a single solution of ferric ammonium citrate and potassium ferricyanide until they appear green. After washing they turn a clear blue color. The tones can be softened in a borax bath.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0020	\$18.95

FORMULARY SEPIA SULFIDE TONER 221

is a classic bleach and redevelopment toner that produces rich permanent sepia-brown tones. Most types of paper tone well with this process, including resin coated paper. The bleach contains potassium ferricyanide that changes the metallic silver to a silver salt. After bleaching, the print is then redeveloped in sodium sulfide.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0035	\$16.95

FORMULARY THIOUREA TONER

will give beautiful rich brown sepia-like tones. The print is first bleached using a ferricyanide-bromide bath then redeveloped in a sulfide bath. In this process, the silver metal in the print is first converted to silver bromide, then to brown silver sulfide. The end result will give the impression of a print made in the late 1800's.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0045	\$19.95

FORMULARY HYPO-ALUM SEPIA TONER

yields sepia brown to reddish brown tones, that are slightly darker brown than the Sepia 221. The tone depends on the paper and length of time toned. Hypo Alum requires a hot water bath (125° F) and takes approximately 25 minutes to tone. The chemical action like other sepia toners is the conversion of silver to silver sulfide. This toner maybe used for many years and improves with age. We recommend fiber based papers only with this toner.

Description	Cat. No.	Price
10 ml	10-0630	\$16.95
50 ml	10-0632	50.95
100 ml	10-0634	77.95

FORMULARY NELSON GOLD TONER

Is similar to Kodak T-21 and is unmatched in its versatility. Tones range from just a hint of warmth to rich sepia browns. Toning can be stopped at any time between 5 and 20 minutes. Final images are permanent and are formed by a combination of silver sulfide and gold. The toner keeps almost indefinitely and its capacity is extended by adding small amounts of gold chloride solution, which is included in the kit. The toner is relatively inexpensive per print. One liter of solution is used to tone about 300 to 400 8x10 prints (with replenishment), depending upon tones desired. The satisfying results of this toner have made it a popular toner over the years. The chemicals in this kit are used to prepare a working solution, and the kit contains sufficient gold chloride from a replenisher solution.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0120	\$87.95
2 liters	06-0130	137.95
4 liters	06-0140	212.95

FORMULARY GOLD PROTECTIVE (GP) TONER

is similar to Kodak GP-1 and offers maximum protection with little or no change to print color. However, with some prints a slight shift towards blue-black may be noted. Prints treated with Gold Protective Toner are even more stable than those toned with selenium or sulfide. This toner can also be used to protect negatives. The chemicals in this kit are used to make a working solution, which has a capacity of about eight 8x10 prints per liter.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0170	\$39.95
10 liters	06-0180	148.95

FORMULARY POLYSULFIDE TONER

yields rich, dark brown and is similar to Kodak T-8. The toning bath contains potassium polysulfide (liver of sulfur) and sodium carbonate. Formulary Polysulfide Toner, like Hypo-Alum Toner, deposits silver sulfide on the image. The difference between these two toners is the depth of the resulting brown color. Polysulfide Toner gives a rich, dark brown tone while tones obtained using the Hypo-Alum are much lighter. Both toners give permanent images. Toning with the Polysulfide Toner takes about 15 to 20 minutes at room temperature. We recommend fiber based paper only for this toner. The chemicals in this kit are used to prepare 1 liter of working solution, which has a capacity of about 35 8x10 prints. A second package of sodium carbonate to be used to partially rejuvenate the spent working solution is included. The working solution is stable for extended periods of time.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0190	\$16.95

FORMULARY IRON GREEN/BLUE TONER

can produce either green or blue tones on fiber base papers. The green tone is a true green unlike most green toners, which have blue-green shadows and light green highlights. The blue tone produced is a bright blue, brighter than Formulary Iron Blue Toner. This kit has a high capacity for prints. This formula was reformulated in 1989. If you tried it previously and were concerned with some of the hazardous chemicals it contained, you will be happy with the new version.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0200	\$25.95

FORMULARY GOLD 231 TONER

produces a wide range of colors. When used alone, Gold 231 gives deep blue tones. When used after sepia toning, red colors are produced whose brilliance are determined by the type of paper used. Partial toning in Hypo-Alum Toner followed by Gold 231 gives blue-black shadows and soft reddish highlights. Gold 231 toner contains ammonium Thiocyanate and gold chloride. The chemicals in the kit are used to make a working solution. The capacity is determined by the method of toning.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0210	\$93.95

FORMULARY GOLD 231 TONER W/O fixer

1 liter	06-0211	\$74.95
---------	---------	---------

FORMULARY PRINTING-OUT-PAPER GOLD TONER.

To some individuals, POP papers seem to have a rather unpleasant yellow-brown color. Gold toning prior to fixing produces red to purple tones depending on the time. This toner is simply a gold chloride – borax solution. One liter of solution is used to tone about ten 8x10 prints.

The chemicals in the kit are used to make a working solution, which keeps well.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0220	\$41.95

FORMULARY/CAW POP TONER

Gelatin chloride printing-out-papers (P.O.P.) customarily used a thiocyanate and gold toning formula, rather than the above gold-borax formula. This kit contains requisite chemicals to compound the toning formula recommended by the Chicago Albumen Works for their gelatin chloride P.O.P. The two stock solutions will keep indefinitely. Enough for about 50 8x10 prints.

To Make Approximately	Cat. No.	Price
50 8x10 prints	06-0230	\$131.95

FORMULARY POP COMBINED GOLD TONER-FIXER

is simple and dependable. It contains sodium thiosulfate and gold chloride. By combining the toner and the fixer for printing-out-paper, considerable time is saved. The chemicals in the kit are used to make 1 liter of working solution, which has a capacity of about thirty 8x10 prints. Care must be taken to ensure that the prints are fixed. If the desired tone is reached quickly, prints must be fixed in a separate bath.

To Make a Working Solution	Cat. No.	Price
1 liter	06-0240	\$43.95

FORMULARY POP LEAD-GOLD COMBINED TONER-FIXER

contains alum, lead acetate, gold chloride, and sodium thiosulfate. This toner-fixer produces rich brown tones. The solution is long lasting and has a capacity of about 8 8x10 prints per 100 ml of working solution. Prints must be toned for at least 10 minutes to allow the gold to tone and the print to fix.

ALTERNATIVE PRINTING PROCESSES

Photographers' Formulary offers a wide variety of kits and chemicals for the Alternative Printing Processes. Alternative Processes date as far back as the 1800's and have become extremely popular as the years go by. The Formulary carries the most complex processes such as Platinum printing, and for the beginners the Cyanotype is a good kit to start with. All kits come with complete instructions. Be sure to check our book selection, as we carry many dealing with the Alternative Processes

REPLACEMENT CHEMICALS FOR PLATINUM AND PALLADIUM PRINTING

A complete line of replacement chemicals for both Platinum and Palladium printing are available in kit form. Each chemical is also listed in the bulk chemical section of our price list.

SENSITIZER A

for Platinum and Palladium printing (30 ml of Ferric Oxalate solution)

ALTERNATIVE LIGHT BOX

UV light boxes for the alternative processes, large enough to expose images up to 20x24". When it's dark outside, or when the sun refuses to shine, these will give you consistent, predictable results. No more ruined prints because the sun decides to hide behind a cloud, no more extended exposure times because you live above the Arctic Circle.

The light boxes are powered by (12) 24" UV tubes, which are shipped with the unit. Lightboxes are a special order item and do not qualify for free shipping when available. Please allow extra time for construction. Call for approx. wait time.

Description	Cat. No.	Price
UV Light Box	12-0590	\$795.00

FORMULARY KALLITYPE PRINTING KIT

is similar to the Platinum/Palladium process in theory and technique. However, Kallitype printing uses a less expensive silver salt. Although the outstanding permanence of Platinum and Palladium is not duplicated, good Kallitype prints have a Platinum-like quality. Print color can be controlled by development. The prints may be toned with printing-out-paper toners, or Gold Protective (GP-1) toner. With proper fixing and clearing, Kallitype prints have good permanence. About 30 4x5 prints can be made using this kit.

To Make	Cat. No.	Price
30 4x5 prints	07-0070	\$69.95

FORMULARY NEW KALLITYPE PRINTING KIT

is similar to the Platinum/Palladium process in theory and technique. However, Kallitype printing uses a less expensive silver salt. Although the outstanding permanence of Platinum and Palladium is not duplicated, good Kallitype prints have a Platinum-like quality.

30 4x5 prints	07-0075	\$62.95

The Formulary recommends distilled water for all solutions!

Results cannot be guaranteed if distilled water is not used.

FORMULARY VAN DYKE BROWN PRINTING KIT

as the name implies, produces beautiful brown images. It is similar to the Kallitype process but uses Ferric Ammonium Citrate as the sensitizer. This modification results in a print that needs no special developer, just a short water rinse and fixing. Van Dyke Brown printing does not have flexibility in contrast control nor the ability to change print color with development. However, the prints may be toned with printing-out-paper toners. This kit will produce 100 4x5 prints.

To Make	Cat. No.	Price
100 4x5 prints	07-0080	\$58.95

FORMULARY CYANOTYPE KIT

is one of the oldest photographic processes and one of the least expensive. Cyanotypes have a long full scale and distinctive blue color. The process can be used to produce a pale white image on a blue background or a blue image on a white background. This process is a contact print process and can be transferred to a variety of media; paper, cloth, leather, ect. This kit will produce 24 8x10 prints. **Liquid kit** comes packaged as 500 ml each of solutions A & B in black bottles.

To Make	Cat. No.	Price
40 8x10 prints Dry Kit	07-0090	\$24.95
40 8x10 prints Liquid Kit	07-0091	24.95

FORMULARY NEW CYANOTYPE KIT

was formulated by Dr. Michael Ware. The formula was published in the Jan/Feb 1997 issue of Photo Techniques. According to Dr. Ware, "the New Cyanotype processes uses a single sensitizer solution, having a long shelf life, to make prints of an excellent stable blue color and a long tonal response, with a speed much faster than the traditional process. "It also loses little, if any, blue color in the final wash water, and is much more suited to a greater variety of papers. This kit will produce approximately 50 8x10 prints if the sensitizer is applied with a glass coating rod.

To Make	Cat. No.	Price
50 8x10 prints	07-0095	\$24.95

FORMULARY GUM BICHROMATE KIT

are one of the most versatile and least complicated of the non-silver processes. We offer two Gum Printing kits; the Classical containing only black pigment, and the Contemporary, containing red, blue, and yellow pigment. Both kits have extensive directions for their use. Gum printing is unique among all the printing processes. It is distinguished by unlimited flexibility. The printer has complete control and may produce prints of any color or contrast. These prints are characterized by a long, open scale that is soft and romantic, but fine detail is not possible. Gum Printing uses water color pigments rather than metal to form the base. The paper is coated with the gum Arabic and dichromate salt. When dried paper is contact printed, the exposed areas become water insoluble. A warm water development dissolves the gum from the unexposed areas. The pigment in the retained areas forms the image. Multiple printing with different colors is a common technique. Makes 35 8x10 prints.

Description	Cat. No.	Price
Classical Gum Printing Kit	07-0100	\$34.95
Contemporary Gum Printing Kit	07-0105	49.95

FORMULARY CASEIN KIT

is a colloid derived from milk. For those already versed in gum printing, casein printing is done much in the same way: a colloid is mixed with a light-sensitive dichromate and water-color, brushed onto paper and exposed under a negative to UV light. Where the light hits the most the casein hardens the most. Where the light hits the least the casein and pigment wash away in a simple water bath, thus an image emerges. For each print this exposure and development process is done multiple times, particularly for a tri color print. Which requires a red, yellow and blue exposure to complete it.

This kit contains Potassium Dichromate, Ammonium Caseinate, and Sodium Benzoate along with red, yellow and blue watercolors enough to make approximately 20, 8x10 tri-color gum prints.

You can find more information on Casein printing and other alternatives in Christina Z Anderson's book "Gum Printing and other amazing Contact Printing Processes"

Description	Cat. No.	Price
Casein Printing Kit	07-0106	\$49.95

FORMULARY SALTED (PLAIN) PAPER KIT

is a modern version of Fox Talbot's printing paper. Salted paper prints have a beautiful delicacy in the lighter tones while the deeper shadows seem flat. The original paper surface is preserved and has an effect on the final print this process is the forerunner of Albumen, Collodion, and Gelatin.

Description	Cat. No.	Price
0.5 liter	07-0110	\$76.95

The Formulary carries Crane's 100% cotton rag papers for use with our alternative process kits! See below and Page 21 for a listing of all our alt. process papers.

Puddle Pusher®

glass coating rods. Glass rod with handle for coating sensitizer onto paper to make alternative process prints. Also excellent for use with Formulight Liquid Emulsion.

New!

Select Contact Print Frames

Just like the old Kodak Contact Print frames, the **Photographers Formulary Print Frames** are made in our shop from high quality Ash, with swing arms into slots on the sides of the frame to create pressure. Our new Contact Print frames and are made from solid 2" Ash, with felt mounted to cabinet grade 1/2" plywood on a hinged back board for print inspection and a sheet of museum frame grade pure glass. Swing arms hold your negative secure while printing and assure a life-long quality frame. All frames are made one inch bigger than the print size quoted. (I.e., an 8x10" frame has a glass size of 9x11" so you get a full 8x10" print).

Description	Cat. No.	Price

11x14 Select Frame	07-2035	\$129.00
16x20 Select Frame	07-2040	\$181.00
20x24 Select Frame	07-2045	\$214.00

Formulary FX-2

produces negatives with a high degree of sharpness and normal grain with the capability of interesting internal effects. Due to the greater definition obtainable with FX-2, grain is less apparent than with D-76. Compared with FX-1, FX-2 produces negatives with finer grain and less acutance, but both have distinctly different pleasing effects. FX-2 used as a stand developer for one hour produces the most interesting internal contrast effects of the FX developers.

To Make a Working Solution	Cat. No.	Price
10 liters (2.5 gal)	01-0085	\$22.95

Formulary Beutler High Acutance Film Developer

is a compensating developer that gives excellent sharpness, medium grain, and low contrast. With 200 ASA or slower films, a high degree of enlargement is possible. Compensation and lower contrast is achieved because more bromide is released in the highlights than in the shadows. The excess bromide in the highlights slows their development relative to the shadow areas where the development continues and brings out the fine details. The net effect is an increase in shadow detail and a decrease in the overall contrast of the negative.

To Make a Working Solution	Cat. No.	Price

STEPWEDGES

These popular 21 step wedges are made for use with either 4x5 or 120/120 film. The step wedges fit directly into a 4x5 or 120 film holder. The film densities vary from .05 to 3.00 units in steps of approximately .15 – corresponding to 1/2 stop intervals. Great for alternative processes to determine exposure.

Description	Cat. No.	Price
21 Step wedge PT/PD	09-0325	\$19.95
120 Step wedge	09-0330	56.95
4x5 Step wedge	09-0335	68.95

FORMULARY TF-5 ARCHIVAL RAPID FIXER

TF-5 is an extraordinary fixer for both paper and some films. TF-5 works well in batch processing, fixing resin coated paper in 30 seconds and fiber based paper in 60 seconds. You can also use TF-5 on TMAX films, fixing for 6 minutes to remove the magenta stain. We recommend 20 rolls of film to 1 liter working solution. TF-5 has little odor when mixed with distilled water. TF-5 is a non-hardening fixer which makes it excellent for prints that are to be toned or retouched. Most modern film emulsions have built-in hardener, eliminating the need for hardener in the fix. The stock solution which has a shelf life of 1 year is diluted 1:3 to make the working solution. The working solution has a shelf life of 6 months.

32 liters (8 gal.) (Ship 2 gallons)	03-0203	92.95

Liquidol Developer

This Paper Developer From Bill Troop and Ron Mowrey. Liquidol is a revolutionary print developer that features exceptionally long shelf life, tray life, and high capacity, along with the convenience of a 1:9 liquid concentrate, thanks to the incorporation of a novel use of electron transfer technology not previously employed in print developers. This technology lets us sustain the development process by using an activating and regenerative element which by itself would not have sufficient photographic activity. Taking this approach allows us more closely to approach the elusive goal of attaining consistent tone and contrast throughout the print run, making this developer especially valuable for consistent batch processing.

ALTERNATIVE PROCESS BOOKS & PAPER

Laser Holography – Experiments

Cat. no. 08-0040 **\$9.95**

Experiments you can do. A 32 page pamphlet that is a very good starter book on holography. Basic but thorough, it gives experiments you can do to set up for basic holography.

Four Corners Country - Dick Arentz

Cat. no. 08-0094 **\$29.95**

Although color studies of the Western landscape can be spectacular, Dick Arentz proves that black-and-white photography offers a crystalline purity all its own. Anyone with an appreciative eye can enjoy the delicate depth and clarity of these images.

The Grand Tour - Dick Arentz

Cat. no. 08-0095 **\$29.95**

The Grand Tour is informed by earlier works of Dick Arentz, but concentrates on the great cities and monuments of European and classical cultures. Arentz has captured picturesque, even bucolic scenes that appear unchanged from a century ago.

Polaroid Transfers – Kathleen T. Carr

Cat. no. 08-0101 **\$35.00**

This comprehensive guide reveals how to create image and emulsion transfers. Polaroid Transfers explains various transfer methods step-by-step and provides detailed pictures to illustrate the sequential instructions. Amphoto Books.

HAHNEMUHLE PLATINUM RAG PAPER

Hahnemuhle Platinum Rag is an uncoated fine art paper. It is designed to meet the highest quality requirement for platinum and any other non-traditional photographic printing processes like Palladium, Van Dyke, Cyanotype and Salt Prints. The natural bright white paper with a weight of 300 gsm is made of 100% cotton fibers. It is acid free and does not contain any alkaline buffering. Along with the optimized sizing, the paper allows for easy coating and clearing. Hahnemuhle Platinum Rag excels with a beautiful tonal range and very deep blacks. The smooth slightly textured surface lends the paper a pleasant feel-to-the-touch. Both sides have a very good print quality without any noticeable difference while printing both the front and the back.

MICRO-MIXERS

These little mixing syringes are the answer to quick and accurate measurement of small quantities of liquid solutions. Extension tube reaches down to the bottom of narrow-mouth bottles. Reads out in 1 ml increments, simply add the amount of solution needed, and return the rest to the storage container. Sizes include 3 ml, 6 ml, 12 ml, 20 ml, 35 ml and 60 ml.

Shipping Information

Hazards shipped within the continental US **must be shipped via UPS Ground**. If this method is not chosen at time of checkout shipping will be recalculated as UPS Ground and purchaser will be charged for any extra shipping charges.

We do not ship hazards to Alaska or Hawaii. We do not ship hazards internationally.

Expedited shipping:

PHOTOGRAPHERS' FORMULARY IS LOCATED IN A REMOTE AREA IN MONTANA AND DOES NOT OFFER NEXT DAY SHIPPING. ALL EXPEDITED SHIPPING METHODS ARE FROM TIME OF ORDER PROCESSING NOT TIME OF ORDER PLACEMENT.

On UPS expedited shipping add 1 day to any method chosen. Examples: 3 Day Air is actually 4 days, 2nd Day Air is actually 3 days.

Please note any orders placed on Friday after 10:00am MST will not be processed until the following Monday.

Some of our chemicals require a DEA Authorized Buyer Form, which can be found on our website and in the back of this catalog. This form must be completed and processed before said chemical purchases can be processed and shipped.

§ = Restricted material. Must submit DEA Authorized Buyer form and photo ID to purchase. No restricted orders shipped without this form, No Exceptions.

DEA AUTHORIZED BUYER FORM

PLEASE READ AND COMPLETE THE FOLLOWING FORM CAREFULLY TO AVOID DELAYS IN ORDER PROCESSING.

Customer: _____
Address: _____

If your address has changed please contact our office.

Please print or type each buyer's full name (first, initial, last) in the left hand column and have the buyer's sign and date in the right column.

Print or Type Buyer's Name	<i>Signature and Date required</i>

Please indicate which chemicals will be purchased:

Please indicate if you buy List I chemicals for resale: Yes No

If Yes please provide your DEA Registration Number: _____

5. What is the intended use for the chemical purchased: (list mixing/recipe) _____

(A process name will not work, be very specific on line 5. Please use your mixing formula and usage directions.)

6. **Please send copy of a current photo ID Scanned via e-mail.**

An acceptable ID is a driver's license containing a picture and current address. The Photo ID's must be scanned and emailed to us at formulary@blackfoot.net **A faxed ID will cause delays in the order, as they are not readable.**

FAX WITHOUT COVER SHEET TO:

Photographers' Formulary, Inc.
Order Office
Fax (406) 754-2896

OR MAIL TO:

Photographers' Formulary, Inc.
Order Office
PO Box 950
Condon, MT 59826-0950

Email to: formulary@blackfoot.net

**Form must be filled out completely before orders are processed and shipped.
Thankyou.**
